## Module: UI Hover & Category Visual Feedback

---

### OC-UI-HOVER-US-001 Hover Visual Feedback on Category Navigation

---

*As a site visitor, I want to see clear visual feedback when hovering over category items so that I can intuitively understand which elements are interactive and whether they contain subcategories.*

#### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                                                |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I hover over a main category with subcategories (e.g., Desktops), Then a shadow/highlight effect appears immediately, the subcategory dropdown is displayed, and subcategory items change color on hover.         |
| AC-02 | Given I hover over a main category without subcategories (e.g., Tablets), Then only a color/visual highlight appears, no dropdown is displayed, and the cursor changes to a pointer.                                    |
| AC-03 | Given I move the mouse away from any category, Then the hover state resets correctly to the default appearance with no flickering or UI glitches.                                                                       |
| AC-04 | Given I move the mouse rapidly between multiple categories and subcategories, Then hover effects appear instantly with smooth transitions and no lag or UI instability across all screen resolutions (375px to 2560px). |

### OC-UI-HOVER-US-002 Hover Does Not Interfere with Click Functionality

---

*As a site visitor, I want clicking on a hovered category or product to work correctly so that hover effects never block or delay navigation.*

#### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                       |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I hover over a main category with subcategories and click a subcategory, Then I am redirected to the correct subcategory page without delay.             |
| AC-02 | Given I hover over a main category without subcategories and click it, Then I am navigated directly to that category page without requiring extra interaction. |
| AC-03 | Given I hover over a product card and click it, Then the product detail page loads correctly and the hover effect does not interfere with the click action.    |

## OC-UI-HOVER-US-003 Category Clickability & Visual Hierarchy

---

*As a site visitor, I want categories to look and behave as clearly clickable elements with a distinguishable visual hierarchy between parent and child items so that navigation is easy to understand.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                                |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I view the category menu without hovering, Then categories are recognizable as interactive elements, and on hover a highlight effect provides additional visual confirmation.                     |
| AC-02 | Given I hover over a main category with subcategories (e.g., Components), Then subcategories appear visually secondary (through indentation, size, or color) so the parent-child relationship is clear. |
| AC-03 | Given I inspect the category navigation bar, Then all 8 category items are evenly spaced, properly aligned, with no overlapping or misalignment in normal or hover states.                              |

## Module: Breadcrumb Navigation

---

### OC-BREAD-US-001 Breadcrumb Structure & Dynamic Updates

---

*As a site visitor, I want the breadcrumb to accurately reflect my current navigation path and update dynamically so that I always know where I am on the site.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                   |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I navigate to a subcategory (e.g., Components > Monitors), Then the breadcrumb shows: Home > Components > Monitors with no missing or duplicated items.              |
| AC-02 | Given I navigate to a category without subcategories (e.g., Cameras), Then the breadcrumb shows only: Home > Cameras.                                                      |
| AC-03 | Given I switch between different categories and subcategories, Then the breadcrumb updates dynamically after each navigation and always reflects the correct current path. |
| AC-04 | Given I access a page directly via URL (e.g., Tablets page), Then the breadcrumb is displayed correctly based on the accessed page hierarchy.                              |
| AC-05 | Given I am on the homepage before selecting any category, Then no breadcrumb is displayed; it appears only after selecting a main category.                                |

## OC-BREAD-US-002 Breadcrumb Click Navigation

---

*As a site visitor, I want to click on breadcrumb items to navigate back up the hierarchy so that I can easily move between levels without using the browser back button.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                                            |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given the breadcrumb shows Home > Laptop & Notebook > Windows and I click 'Laptop & Notebook', Then I am redirected to the Laptop & Notebook category page and the breadcrumb updates to: Home > Laptop & Notebook. |
| AC-02 | Given I click 'Home' in the breadcrumb, Then I am redirected to the homepage.                                                                                                                                       |
| AC-03 | Given I navigate to a subcategory page in one click, Then a single click is sufficient — no double-click is required.                                                                                               |

## OC-BREAD-US-003 Breadcrumb Visibility & Consistency

---

*As a site visitor, I want the breadcrumb to be visible, consistently styled, and correctly aligned on all pages and screen sizes so that it is always readable and usable.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                            |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I navigate through all category and subcategory pages, Then the breadcrumb is visible on all applicable pages with correct separators and no broken layout.                                   |
| AC-02 | Given I view a breadcrumb with a long category name (e.g., 'Laptops & Notebooks'), Then the text is either fully visible or properly handled without breaking the UI or overlapping other elements. |
| AC-03 | Given I open the site on mobile, tablet, or desktop, Then the breadcrumb is readable, properly aligned, and functional on all screen sizes.                                                         |

## Module: Category Navigation

---

### OC-NAV-US-001 Category & Subcategory Click Navigation

---

*As a logged-in user, I want clicking on categories and subcategories to navigate me correctly to the right page so that I can browse products efficiently.*

## Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                   |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I click on a main category in the breadcrumb (e.g., Laptop & Notebook), Then I am redirected to that main category page and the breadcrumb updates to show only the main category.   |
| AC-02 | Given I click once on a subcategory (e.g., Windows under Laptops), Then I am redirected to the subcategory page with a single click and no double-click is needed.                         |
| AC-03 | Given I navigate between multiple subcategories (e.g., Windows → Mac → Monitors), Then each selected page loads correctly, content updates properly, and no crashes or broken pages occur. |
| AC-04 | Given I click on a main category without subcategories (e.g., Tablets), Then I am navigated directly to that category page without any intermediate screen.                                |

## Module: Responsive UI & Performance

### OC-RESP-US-001 UI Layout Responsiveness Across Screen Sizes

*As a user on any device, I want the website layout to adapt correctly to different screen sizes so that I can browse without overlap, broken elements, or horizontal scrolling.*

#### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                              |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I open the website on mobile (375px), Then categories appear in simplified form, the menu works, and the breadcrumb is accessible without overlap.              |
| AC-02 | Given I open the website on tablet (768px–1024px), Then the layout adjusts similarly to desktop with all categories, subcategories, and breadcrumb working correctly. |
| AC-03 | Given I open the website on desktop/laptop (1366px+), Then hover effects, category alignment, and all UI elements display with no issues.                             |
| AC-04 | Given I open the navigation menu on mobile, Then a hamburger menu is displayed, and it opens/closes smoothly with all categories accessible.                          |

### OC-RESP-US-002 Performance & Stability Under User Interactions

*As a site visitor, I want the website to load quickly and remain stable under rapid interactions and varying network conditions so that browsing is smooth and reliable.*

## Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                               |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I load any page on a stable connection, Then the page loads within 3 seconds with no freezing or lag.                                                                                            |
| AC-02 | Given I rapidly switch between categories or click navigation elements repeatedly, Then the system handles all actions correctly, each navigation completes within ~300ms, and no UI breakdown occurs. |
| AC-03 | Given I use the website on a slow 3G network, Then pages may load with delay (up to ~25 seconds) but the UI remains functional and no broken layout appears.                                           |
| AC-04 | Given I disconnect from the internet and refresh, Then the browser shows an appropriate offline message and the site recovers correctly after reconnection.                                            |

## Module: Wishlist

---

### OC-WISH-US-001 Add Product to Wishlist via Category Navigation

---

*As a logged-in user, I want to navigate from a main category through a subcategory to a product and add it to my Wishlist so that I can save items for later.*

#### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                                |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I hover over a main category, select a subcategory, and open a product, When I click the heart (Wishlist) icon, Then the product is added to my Wishlist and a success notification is displayed. |
| AC-02 | Given the product is added to the Wishlist, When I navigate to the Wishlist page, Then the product appears correctly in the list.                                                                       |

### OC-WISH-US-002 Wishlist Access & Authentication Control

---

*As a user, I want the Wishlist to be accessible only when authenticated so that my saved items are secure and guest users are properly redirected.*

#### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I am logged in, When I navigate to the Wishlist page (via menu or direct URL), Then the Wishlist page is displayed correctly with my saved items. |

|              |                                                                                                                                                                                                                      |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-02</b> | Given I am a guest (not logged in), When I try to add a product to the Wishlist, Then the page scrolls to the top and a message is shown: 'You must login or create an account to save [product] to your wish list!' |
| <b>AC-03</b> | Given I log out and try to access the Wishlist via direct URL, Then I am redirected to the Login page.                                                                                                               |
| <b>AC-04</b> | Given I log out and log back in, When I open the Wishlist, Then previously added items are still present.                                                                                                            |

## OC-WISH-US-003 Wishlist Item Management

*As a logged-in user, I want to remove items from my Wishlist and navigate to product details from it so that I can manage my saved products effectively.*

### Acceptance Criteria

| AC #         | Criteria                                                                                                                                                                                             |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-01</b> | Given I click the delete (X) button next to a Wishlist item, Then the item is removed from the Wishlist and the counter decreases by one.                                                            |
| <b>AC-02</b> | Given I click on a product image in the Wishlist, Then I am redirected to the correct product detail page.                                                                                           |
| <b>AC-03</b> | Given I press the browser back button from the product detail page, Then I return to the Wishlist page correctly.                                                                                    |
| <b>AC-04</b> | Given I try to add a product that is already in the Wishlist, Then the system does not duplicate it in the list (though a misleading success message may currently appear — this is a known defect). |

## OC-WISH-US-004 Add to Cart from Wishlist

*As a logged-in user, I want to add products to my Cart directly from the Wishlist so that I can quickly purchase saved items.*

### Acceptance Criteria

| AC #         | Criteria                                                                                                                                                                                                                     |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-01</b> | Given I click the Cart/Shop button for a product in the Wishlist, Then the product is added to the Cart and appears correctly on the Cart page. [NOTE: Currently a defect — system redirects to product detail page instead] |
| <b>AC-02</b> | Given I add multiple products from the Wishlist to the Cart, Then all products appear in the Cart with correct quantities and the Cart counter updates accurately.                                                           |
| <b>AC-03</b> | Given I view the Cart after adding items, Then the Cart counter correctly reflects the number of items without showing a visual animation with no actual update.                                                             |

## OC-WISH-US-005 Wishlist Counter & Persistence

---

*As a logged-in user, I want the Wishlist counter to stay accurate and my items to persist across sessions so that I can rely on the Wishlist as a saved list.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                       |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I add items to the Wishlist and refresh the page, Then all items remain in the Wishlist and the counter reflects the correct count.                      |
| AC-02 | Given I add more than 15 products to the Wishlist, Then all items are stored correctly with no duplication, UI overlap, or performance issues.                 |
| AC-03 | Given I log out and log back in, Then my previously saved Wishlist items are still visible and the counter is correct.                                         |
| AC-04 | Given I add and then remove items from the Wishlist, Then the counter increments and decrements correctly, though a slight delay before removal is acceptable. |

## OC-WISH-US-006 Wishlist Continue Button Navigation

---

*As a logged-in user, I want the 'Continue' button in the Wishlist to navigate me to a relevant page so that I can keep shopping after reviewing my list.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                       |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given the Wishlist is empty and I click the 'Continue' button, Then I am redirected to the Home or Products page. [NOTE: Currently a defect — redirects to Login page instead] |
| AC-02 | Given the Wishlist has items and I click the 'Continue' button, Then I am redirected to the Home or Products page consistently.                                                |

## OC-WISH-US-007 Wishlist Breadcrumb

---

*As a logged-in user, I want the breadcrumb on the Wishlist page to reflect the actual navigation path I used so that I understand where I am in the site structure.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                                               |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I navigate to the Wishlist from any page, Then the breadcrumb should reflect the actual navigation path. [NOTE: Currently a defect — breadcrumb always shows Home > Account > Wishlist regardless of entry path] |

---

## OC-WISH-US-008 Wishlist Responsive UI

---

*As a user on a mobile or tablet device, I want the Wishlist page to display correctly and all buttons to be functional so that I can manage my Wishlist on any device.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                   |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I open the Wishlist on a mobile device, Then all items, buttons, and the counter icon are fully visible with no horizontal scroll or layout overlap. |
| AC-02 | Given I open the Wishlist on a tablet, Then Remove (X) and Cart buttons are correctly aligned with no overlapping.                                         |
| AC-03 | Given I scroll through the Wishlist in portrait or landscape mode on mobile, Then scrolling is smooth with no UI jitter, flickering, or horizontal drift.  |
| AC-04 | Given I add or remove a Wishlist item on mobile or tablet, Then the success/removal notification is fully visible and readable with no overlap.            |

## OC-WISH-US-009 Wishlist Session & Data Integrity

---

*As a logged-in user, I want my Wishlist data to be consistent and protected so that no unauthorized access or data corruption occurs.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                              |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I copy the Wishlist URL and open it in a new tab while logged in, Then the Wishlist page displays correctly with my saved items.                |
| AC-02 | Given I am logged out and paste the Wishlist URL, Then I am redirected to the Login page.                                                             |
| AC-03 | Given I try to add the same product to the Wishlist multiple times, Then the product is not duplicated and the counter does not increase incorrectly. |
| AC-04 | Given I log out and log in again, Then my Wishlist data is fully restored and consistent with what I had before logging out.                          |

## Module: Currency Selector

---

### OC-CURR-US-001 Currency Selector Core Functionality

---

*As a site visitor, I want to select a currency from the header dropdown and see all prices update immediately so that I can browse products in my preferred currency.*

## Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                         |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I click the currency selector in the header, Then the dropdown opens successfully and all available options (USD, EUR, EGP) are selectable.                                                |
| AC-02 | Given I select a currency (e.g., EUR), Then the selected currency symbol (€) is displayed next to the 'Currency' label in the header immediately.                                                |
| AC-03 | Given I select any currency and navigate between pages (Home, Category, Cart, Wishlist, Checkout), Then all product prices are updated consistently with the correct currency symbol throughout. |
| AC-04 | Given I change currency multiple times, Then each change is reflected correctly within an acceptable response time (< 3 seconds on stable connection).                                           |

## OC-CURR-US-002 Currency Selector – Price Accuracy & Conversion

*As a site visitor, I want product prices to convert accurately between currencies so that I can make informed purchasing decisions.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                   |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I switch between USD, EUR, and EGP, Then product prices are updated proportionally and mathematically consistently (no random mismatches or negative values).                        |
| AC-02 | Given I view products on the Home page, Category pages, Cart, Wishlist, and Checkout after selecting a currency, Then all prices across all pages reflect the selected currency correctly. |
| AC-03 | Given I select a currency on the Cart page, Then item prices, subtotal, shipping, and total are all recalculated and displayed in the selected currency.                                   |

## OC-CURR-US-003 Currency Selector – UI & Visual Design

*As a site visitor, I want the currency selector to be visually clear and provide proper interaction feedback so that I can find and use it easily.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I hover over the currency selector in the header on desktop, Then a visual hover effect (darker color or highlight) is applied and removed when the mouse leaves. |
| AC-02 | Given I view the currency selector on desktop, Then it displays a text label ('Currency'), the current symbol, and a dropdown indicator clearly.                        |
| AC-03 | Given I view the currency selector on mobile, Then the symbol and dropdown icon are visible and clickable even without a text label.                                    |

|              |                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-04</b> | Given the website is in light theme (no dark theme is supported), Then the currency selector text, icons, and dropdown are clearly readable with proper contrast. |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## OC-CURR-US-004 Currency Selector – Responsiveness & Cross-Browser

*As a user on any device or browser, I want the currency selector to work correctly everywhere so that currency preferences are respected regardless of how I access the site.*

### Acceptance Criteria

| AC #         | Criteria                                                                                                                                                                 |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-01</b> | Given I use the currency selector on desktop, tablet, or mobile, Then it is visible, aligned, clickable, and functional on all screen sizes with no overlap or clipping. |
| <b>AC-02</b> | Given I change currency on Google Chrome, Then prices update correctly across all pages with no UI or functional issues.                                                 |
| <b>AC-03</b> | Given I change currency on Microsoft Edge, Then the behavior is identical to Chrome — prices update correctly on Home, Category, Wishlist, Cart, and Checkout pages.     |
| <b>AC-04</b> | Given I test currency changes across Chrome, Edge, and other browsers, Then behavior is consistent with no mismatches or layout differences between browsers.            |

## OC-CURR-US-005 Currency Selector – Network & Performance

*As a site visitor, I want currency changes to be responsive under normal conditions and handled gracefully on slow or offline connections.*

### Acceptance Criteria

| AC #         | Criteria                                                                                                                                                                |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AC-01</b> | Given I am on a stable connection and change currency, Then prices update within approximately 400–600ms with no freezing or unexpected page reload.                    |
| <b>AC-02</b> | Given I am on a 3G network and change currency, Then prices update after a noticeable delay (up to ~10 seconds) but without UI errors or broken layout.                 |
| <b>AC-03</b> | Given I go offline and try to change currency, Then the browser shows an offline page; after reconnecting and refreshing, currency functionality is restored correctly. |

## OC-CURR-US-006 Currency Default & Localization Behavior

---

*As a first-time visitor, I want the site to remember my last selected currency and handle default currency correctly so that I do not have to reselect it every visit.*

### Acceptance Criteria

| AC #  | Criteria                                                                                                                                                                                        |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AC-01 | Given I visit the site for the first time or after clearing cache, Then the last selected currency is retained (auto-selection by location is not currently implemented — this is a known gap). |
| AC-02 | Given I select a currency and refresh the page, Then the same currency remains selected without resetting to a default.                                                                         |

### Definition of Done

---

- ✓ All Acceptance Criteria passed
- ✓ No Critical / High defects open
- ✓ Cross-browser compatibility verified (Chrome, Edge)
- ✓ Responsive behavior verified on mobile, tablet, and desktop
- ✓ Breadcrumb structure validated across all navigation flows
- ✓ Wishlist CRUD operations tested including defect documentation
- ✓ Currency conversion accuracy validated across all pages
- ✓ Performance benchmarks met (page load < 3s on stable connection)
- ✓ Security checks passed (session handling, unauthorized access)
- ✓ Usability and keyboard accessibility verified
